In May and June 2018, Minister of Transport Marc Garneau announced federal funding commitments of more than $200 million for Greater Vancouver Gateway 2030 projects.

The investment in infrastructure means that a group of projects will move forward that will provide national, provincial, regional, and local benefits. By removing capacity constraints and freight bottlenecks, these projects will help get Canadian goods to market more efficiently, grow the economy, create well-paying jobs, and support liveable, green communities with improvements to safety, mobility and air quality.

We are now focusing on securing funding commitments from other partners, working with municipal staff to undertake technical studies, community engagement and other works to advance project design, complete project definition, and plan for project construction.

Projects which did not receive funding during this intake remain a priority. We will explore other opportunities to move forward with these projects, including looking at future phases of federal funding intakes.

The Gateway Transportation Collaboration Forum is grateful for the support received from Members of Parliament, Aboriginal groups, municipalities, industry associations, terminal operators, cargo owners and members of the community in securing federal funding. We look forward to working with you through the development of these projects and in preparing for future funding applications.

About the Greater Vancouver Gateway 2030 Program
Greater Vancouver Gateway 2030 is the Gateway Transportation Collaboration Forum’s strategy for smart infrastructure investment to address the community impacts of trade and population growth.

Greater Vancouver Gateway 2030 identifies close to 40 projects that will enhance the movement of goods and people through the Vancouver Gateway, and support sustainable growth, environmental stewardship and liveability for communities.

Greater Vancouver Gateway 2030 is guided by the Government of Canada’s commitment to strengthen trade corridors to increase trade and access to global markets.

About the Gateway Transportation Collaboration Forum
The Gateway Transportation Collaboration Forum, established in summer 2014, is a collaborative effort to ensure the gateway is ready to manage growing trade. It consists of Transport Canada, the B.C. Ministry of Transportation and Infrastructure, the Vancouver Fraser Port Authority, TransLink and the Greater Vancouver Gateway Council.

Oversight of the Gateway Transportation Collaboration Forum is provided by a Steering Committee, consisting of senior executives from the partner organizations. Its responsibility is to understand stakeholder interests and issues, collaborate on advancing priority infrastructure projects, evaluate and prioritize projects, and identify and pursue viable funding sources.
GREATER VANCOUVER GATEWAY 2030

Projects receiving NTCF funding commitments (2018)

- Burrard Inlet Road and Rail Improvement Projects
- Mountain Highway Underpass Project
- North Shore Corridor Capacity Improvement Projects
- Westwood Street and Kingsway Avenue Grade-Separations Project
- Pitt River Road and Colony Farm Road Rail Overpasses Project
- Harris Road Underpass and Kennedy Road Overpass Project
- Funding received for technical studies and engagement

This map shows projects that are part of Greater Vancouver Gateway 2030. There are other trade and transportation initiatives being led by Gateway Transportation Collaboration Forum members and other organizations throughout the region not shown on this map.
Benefits of Greater Vancouver Gateway 2030

The benefits of Greater Vancouver Gateway 2030 are strategically aligned with priorities of the federal, provincial, and local governments, as well as Aboriginal groups, businesses big and small, and growing communities around the country.

---

**Economic Benefits**
- Growing the economy
- Creating well-paying direct and indirect jobs
- Stimulating private sector investment
- Removing capacity constraints and freight bottlenecks and improving trade corridor capacity

**Community & Environmental Benefits**
- Reducing greenhouse gas emissions and contributing to climate change reduction targets
- Improving safety and mobility by separating trains from pedestrians, cyclists and drivers
- Reducing noise by minimizing traffic conflicts and implementing noise mitigation

---

**Anticipated Greater Vancouver Gateway 2030 Timeline**

- **Identify GVG 2030 projects**
  - Complete (2016)

- **Prepare and submit first funding applications**
  - Complete (2017)

- **Delivery begins on successful Phase 1 projects**
  - (2018/2019)

- **Prepare and submit Phase 2 funding applications**
  - (2020)

- **Delivery begins on successful Phase 2 projects**
  - (2021/2022)

- **Prepare and submit Phase 3 funding applications**
  - (2022)

- **Delivery begins on successful Phase 3 projects**
  - (2023/2024)

- **ONGOING**
  - Engagement with key stakeholders and First Nations
